

THE MOST PROFITABLE METHOD ONLINE

HarpersTribune.com - Wealth Lifestyle

THE MOST PROFITABLE METHOD ONLINE

In this short report I am going to disclose to you what I feel like is the most profitable method you can deploy to generate an income online.

Obviously, there are no guarantees that you'll read this report and walk away with millions of dollars, however, what I can promise you is that I will show you how myself and plenty of others have done just that many times over.

I believe the most important thing for you to understand upfront is that

making money online can really be broken down into 3 buckets of opportunity.

E-Commerce – In this method you are selling physical goods online. You've seen plenty of people raving about Amazon stores and Shopify stores, lately right?

This happens to be the route they've taken to build their online business.

Affiliate Marketing – In this method you don't actually have to start your own store and handle the day to day activities of owning your own business.

You really just become a marketing arm for another company and earn a commission from any sales you generate for them.

Digital Marketing – In this method you simply sell knowledge or digital access to products. This would be your coaches, consultants or digital course creators.

Now looking at these 3 buckets you might have a hard time choosing the one that would be the most profitable for you right?

I am sure you will instantly 'gravitate' towards one of them though.

You may not be a big fan of dealing with physical products, may feel like you don't understand marketing or may say there's no way you could sell your knowledge.

The fact of the matter is that two of these methods are quite difficult.

I am going to break them down and show you the pros and cons of this and then disclose to you what I believe to be the most profitable method to build your business online in 2020 .

1) E-Commerce

E-Commerceahhhh. It's not so easy!

So let's tackle the whole theory that creating an online store or an Amazon store is the easiest and most profitable method to build an online business. In my opinion it's not and here's why...

The profit margins on physical products like this are very slim .

While talking with a friend who runs hundreds of Amazon stores and he explained to me how they are able to squeeze out the little guys or the new startups.

It went something like this:

“When we see a new store pop up selling a product that we sell the first thing we do is cut our pricing. Since we're already so large we're buying at much deeper discounts than the new person able to get.

After a few days usually the newer stores have lost so much money they discontinue selling the product we are selling. They simply can't compete on the prices, which gives us the leverage we need to always win.”

To me that doesn't sound very profitable for someone just starting out right? I continued on and asked him what happens if they just simply STAY there and refuse to go away.

If you keep your prices cut then you're going to shrink your margins to a point where not even you are making enough profit for this to be worth doing right?

Here was his response:

“If they don't go away after a few days we simply contact the manufacturer of the product that we are both selling. Usually we know them on a first name basis because we're one of their biggest sellers. We simply tell them to either cut the new store off (meaning stop selling product to them)

or we're going to stop selling their product. No company wants us to quit selling their product because we move a lot of units each day. Usually they will immediately cut off the new and unproven store from buying and that solves the issue."

As you can see there are plenty of established businesses that sell on

Amazon and on Shopify stores that simply will be able to out price you and out maneuver you as a new business owner.

People think this is easy, but it's really not.

A side from the fact that margins are really slim and you're a pretty small fish swimming around with big sharks it's also just time consuming.

Dealing with stocking products, shipping orders, tracking numbers, customer service, pricing wars, rising ad costs and dropping profit margins, store management, merchant processing, and the list goes on and on.

There is just simply a more profitable method to earn an income online in my opinion.

2) Digital Marketing

Digital Marketing – Let's Sell Some Knowledge!

When we start discussing this method of building an income online we immediately eliminate a large portion of people.

Do you have specific knowledge to sell? If so are you cool with trading time for money?

That's what coaches and consultants are doing on a daily basis.

You're trading X amount of time for X amount of dollars, which is exactly what you do working at a regular 9-5 job right?

I am not saying it can't be a profitable venture because it certainly can be if you're in the right niche.

I know consultants who are making 7 figures a year just helping people with specific things in their business, however, most of them are tired and always looking for a way to replace their current income.

I know it might be hard to imagine making 7 figures a year and being unhappy, but there is the old saying that money can't buy happiness, right?

I just think getting into the coaching and consulting business is difficult because you limit your ability to make money and of course you still have to have some type of knowledge or skill to share with the world.

It does not mean this is a bad industry to be in by any means.

It simply means I don't think it's the most profitable method to build your own online business.

3) Affiliate Marketing

Affiliate Marketing – The Most Profitable Method Online Finally!

It's time you realize that affiliate marketing is by far the most profitable method for generating an income online.

If you just look at the facts, it's super simple to start even with no investment or website:

- You don't have to deal with any type of stocking products or finding products to sell.

- You don't have to worry about bigger fish putting you out of business. You're not "stuck" selling one type of product, it's super easy to pivot at any point in time.

- You aren't trading time for money.

- You don't need a specific skill or knowledge base to get started.

I could go on and on about this, but the facts are it's just easier to get started – especially for someone who's new to online business.

Affiliate Marketing means you simply promote someone else's products.

You can currently be an affiliate for Amazon, Best Buy, eBay, Walmart and almost any other business online!

Wouldn't you rather partner with and help these big businesses than to try to compete with them?

I've never understood why someone wants to try to compete with a business that has a much larger ad budget and household name.

The biggest issue people have when trying to start an affiliate marketing business is just getting approved for good products to promote.

There are networks like ClickBank.com that will give you access to hundreds of products to promote, however, if you are new sometimes, they will decline you access.

Now since I realized this is the most profitable method online BUT people have a hard time getting started because they can't get approved for good offers I decided I needed to help.

This is where the [Super Affiliate System](#) comes in because the program was created to help new to advanced Affiliate marketers to get started in an easy and step by step method.

Inside the program you'll even learn how to get automatic approval to some of the best products and services that usually reject new affiliate marketers. John helps you to get around this only setback that is part of affiliate marketing.

We already discussed this issue above and it has to do with getting rejected to promote certain products and services. Don't get me wrong if you are using a marketplace called Clickbank.com you are approved automatically for almost all products and services (with a few exceptions where you have to request to promote them on a case by case basis).

These are pretty rare and you can make a very good living by promoting all the Clickbank products and services that do not even require an approval process.

However, if you'd like to get approved by these types of offers within Clickbank or by other Networks that work on a by approval request basis, John is going to teach you exactly how to do it and get approved each time you apply his teachings and scripts within the Super Affiliate System. He will give you every creative and every detail so that you can thrive doing this.

Some of these products allow you to earn up to \$748.50 for just one single sale, which as you can imagine adds up if you make a lot of sales each month. Inside the Super Affiliate System you will learn exactly which ones to promote and which ones to prevent like the plague.

The best part about this program is that all the work gets done inside the program and John is doing it step by step together and over the shoulder with you within the program. The course takes you step by step each day through the process of getting your affiliate marketing business and campaigns setup the right way the first time without wasting time or energy. It just gets done if you follow the program.

By the time you finish the course you should know how to run your entire affiliate marketing business yourself. If you still need help, you just contact my support team or John and you don't waste time finding the solution yourself.

Once you went through the whole program all your affiliate marketing skills are set so that you can apply your skills to every new affiliate marketing campaign that you decided to run. You will learn skill on building your email list, building landing pages, generating traffic and of course tracking commissions, and scaling up.

It's simple. It's straight forward. It's for beginners.

Even if you choose not to utilize the Super Affiliate System I still feel like you should look into affiliate marketing. It will take you a lot more time, energy, and stress, but in the end it is all worth it.

I have never regretted my decision even though I started by my own in the beginning. It was a long and rocky way I have to admit, but I don't regret it. If I had to do everything again and restart from scratch as an affiliate marketing beginner, I would do it the right way this time meaning I would follow the path of a successful affiliate marketer who has built successful affiliate marketing businesses over and over again and I'd profit from that knowledge instead of doing it all by myself again.

I have tested pretty much every affiliate marketing program out there and spent a little fortune on training. I can therefore tell you that no other affiliate marketing training program comes even close to what is included in the Super Affiliate System.

In comparison to every other program, this is the big winner because John truly cares for your success and he gives you everything you need to produce exactly the same exact outcome as he is able to produce.

Most other affiliate training programs are quickly thrown together to make a quick buck and the next month they sell something similar just with a different name, but John has dedicating his life to his program, developing it, and adding more and more to it so that it is updated regularly with the latest methods that are really working so that everyone has the chance to quit his or her 9 to 5. Other program just use stale and rehashed stuff that is outdated and that has no chance of success.

This is not a review of The Super Affiliate System or comparison between it and any other affiliate marketing program and there are many other reasons why the Super Affiliate System is the best option out there, but I just wanted to tell you about my own experience in a few words.

If you want to learn more about the Super Affiliate Sytem Affiliate Marketing training program I recommend you [watch John's Free Affiliate Marketing Training right here to see for yourself what John is all about and why this is different!](#)

Anyway, I urge you to chose the model of affiliate marketing which you really should be doing because the other business models that I discussed above are way too hard for beginners with zero reputation.

I know a lot of people who chose the wrong business model from the get go and regret it deeply because of the reasons that I detailed above. They wasted lots of money, resources, energy, and time. I can't even imagine how frustrating it must be to invest so much tangible and intangible resources just to discover that it was not worth it.

How frustrating to put so much into a business to find out that there is no profit left at the end. So I encourage you no matter if you want to follow a successful affiliate marketing program or not to at least chose the right business model and that is Affiliate Marketing.

In my opinion and experience it's the most profitable method online and that's the reason for the title of this report.

If you have further questions about anything discussed in this report I am here for help and support. Please see the page below for all details.
